ARCHIVE COPY

#### DDC AVAILABILITY NOTICES

1. Distribution of this document is unlimited.
2. This document is subject to special export controls and each transmittal to foreign governments or foreign nationals may be made only with prior approval of US Army Aviation Materiel Laboratories, Fort Eustis, Virginia 23604.
3. In addition to security requirements which must be met, this document is subject to special export controls and each transmittal to foreign governments or foreign nationals may be made only with prior approval of USAAVLABS, Fort Eustis, Virginia 23604.
4. Each transmittal of this document outside the agencies of the US Government must have prior approval of US Army Aviation Materiel Laboratories, Fort Eustis, Virginia 23604.
5. In addition to security requirements which apply to this document and must be met, each transmittal outside the agencies of the US Government must have prior approval of US Army Aviation Materiel Laboratories, Fort Eustis, Virginia 23604.
6. Each transmittal of this document outside the Department of Defense must have prior approval of US Army Aviation Materiel Laboratories, Fort Eustis, Virginia 23604.
7. In addition to security requirements which apply to this document and must be met, each transmittal outside the Department of Defense must have prior approval of US Army Aviation Materiel Laboratories, Fort Eustis, Virginia 23604.
8. This document may be further distributed by any holder only with specific prior approval of US Army Aviation Materiel Laboratories, Fort Eustis, Virginia 23604.
9. In addition to security requirements which apply to this document and must be met, it may be further distributed by the holder only with specific prior approval of US Army Aviation Materiel Laboratories, Fort Eustis, Virginia 23604.

#### DISCLAIMER

10. The findings in this report are not to be construed as an official Department of the Army position unless so designated by other authorized documents.
11. When Government drawings, specifications, or other data are used for any purpose other than in connection with a definitely related Government procurement operation, the United States Government thereby incurs no responsibility nor any obligation whatsoever; and the fact that the Government may have formulated, furnished, or in any way supplied the said drawings, specifications, or other data is not to be regarded by implication or otherwise as

in any manner licensing the holder or any other person or corporation, or conveying any rights or permission, to manufacture, use, or sell any patented invention that may in any way be related thereto.

12. Trade names cited in this report do not constitute an official endorsement or approval of the use of such commercial hardware or software.

#### DISPOSITION INSTRUCTIONS

13. Destroy this report when no longer needed. Do not return it to originator.

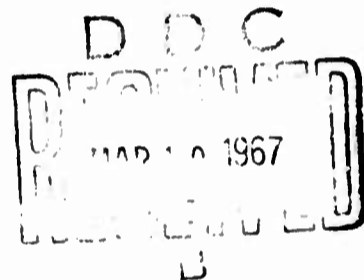

14. When this report is no longer needed, Department of the Army organizations will destroy it in accordance with the procedures given in AR 380-5.

## 1.0 PREFACE

This report consists of data substantiating the structural integrity of the nose landing gear assembly and the trunnion pins required for attachment to the airplane.

This assembly is for the Ryan Aeronautical Corporation, San Diego, Ryan XV5A Airplane. The basic landing and taxi loads are obtained from Ryan (basic loads) report dated October 10, 1962 hereafter noted as reference (1) in this stress analysis. All loads are considered as limit and proper conversion to ultimate loads have been made.

## 5.0 DISCUSSION (con't)

Secondary bending due to strut deflection is included in the analysis of the cylinder and inner cylinder (also known as the piston). The effect of strut deflection is also included in the attach point reactions. The deflection was taken in the direction of the load for each critical condition with gear at F.E. -1.6 and F.E. -5.3. Loads were taken from Ryan Report dated 10 October 1962, and are listed in Tables III and IV of this report.

Conditions - Spin-up (Fwd.) 9200#, Springback (Fwd.) 9200#, and Turning (Fwd.) 12,500# are used for strut deflections. The calculated deflection at the axle centerline for Spin-up (Fwd.) 9200# is 1.23 in., Springback (Fwd.) 9200# is -1.144 in., and for Turning (Fwd.) 12,500# is .290 in. These deflections are utilized in determining the reaction loads on the cylinder, piston, drag brace, crossbeam, and axle. These reaction loads are determined by matrix system on pages 133 thru 149.

The minimum margins of safety for all of the nose landing major components are listed on pages 13 thru 17.

## 6.0 LIST OF STRESS SYMBOLS

### ALLOWABLE STRESSES

- $F_{tu}$  = Allowable Ultimate Tensile Stress - psi  
 $F_{ty}$  = Allowable Yield Tensile Stress - psi  
 $F_b$  = Allowable Bending Stress - psi  
 $F_{br}$  = Allowable Bearing Stress - psi  
 $F_{cu}$  = Allowable Ultimate Compressive Stress - psi  
 $F_{cy}$  = Allowable Yield Compressive Stress - psi  
 $F_{cc}$  = Upper Limit of Column Stress For Local Failure - psi  
 $F_{co}$  = Upper Limit of Column Stress for Primary Failure  
 $F_{st}$  = Allowable Torsional Stress - psi  
 $F_{su}$  = Allowable Shear Stress - psi

### ALLOWABLE LOADS

- $P_{bru}$  = Ultimate Allowable Shear Bearing Load - lbs.  
 $P_{tu}$  = Ultimate Allowable Tension Load - lbs.

### STRESS RATIOS

- $R_{bu}$  = Ultimate Tension or Compression Bending Modulus Stress Ratio  
 $R_c$  = Compressive Stress Ratio  
 $R_t$  = Tension Stress Ratio  
 $R_{ht}$  = Tension or Compression Hoop Stress Ratio  
 $R_{su}$  = Ultimate Transverse Shear Stress Ratio  
 $R_{st}$  = Torsion Stress Ratio

## 6.0 STRESS SYMBOLS (cont.)

### STRESSES

$f_t$	=	Tensile Stress - psi
$f_b$	=	Bending Stress - psi
$f_{br}$	=	Bearing Stress - psi
$f_c$	=	Compressive Stress - psi
$f_s$	=	Shear Stress - psi
$f_{st}$	=	Torsional Shear Stress - psi
$f_{ht}$	=	Hoop Tension Stress - psi
$f_{hc}$	=	Hoop Compressive Stress - psi

### MISCELLANEOUS SYMBOLS

P	=	Axial Load - lbs.
M	=	Bending Moment - in.-lbs.
T	=	Torsional Moment - in.-lbs.
S	=	Shear Force - lbs.
E	=	Tensile Modulus of Elasticity - psi
$E_c$	=	Compressive Modulus of Elasticity - psi
G	=	Modulus of Rigidity - psi
$\rho$	=	Radius of Gyration - in.
I	=	Moment of Inertia - (in.) <sup>4</sup>
e	=	Eccentricity - in.
O.D.	=	Outer Diameter - in.
